

Opera II Enterprise SQL is the latest addition to the Opera II solutions portfolio. Designed and built using the most powerful components of Opera II Enterprise, it delivers a wealth of impressive functionality alongside Microsoft's industry-leading database technology, MS SQL Server.

The Opera II range has been designed to meet the specific needs of small and medium-sized businesses by providing a highly functional, fully customisable and cost-effective accounting and business solution. And, being modular, Opera II is designed to grow dynamically to accommodate the ever-increasing needs of modern businesses.

The benefits of Microsoft SQL Server over the Opera II Enterprise standard database include extended features such as:

Automation of tasks

Automation of recurring administrative tasks is a key benefit of SQL Server. Automatic data file size management and automatic memory management are just two functions of SQL Server that save time and money. Backing up and restoring data can also be automated without any disruption to your work activities. These tasks can be monitored and the system administrator notified when attention is required.

Online Analytical Processing (OLAP)

With SQL Server OLAP functionality, your Opera II Enterprise SQL solution can rapidly analyse significant volumes of data, giving you a better and more immediate understanding of key elements of your business. Data is organised in logical categories such as financial periods, sales territories, and product groups. This allows businesses to extract meaningful information and reports that everyone can use. Underlying business trends can be quickly identified, allowing the right decisions to be made at the right time.

Greater integration with third party software

Opera II Enterprise SQL data is stored in MS SQL Server so that business transactions can be easily accessible and used in conjunction with other SQL Server databases or third party applications. This flexibility provides greater control of key business information that might be locked away in various applications throughout the organisation. When brought together, this information can help organisations to develop new marketing strategies, analyse business trends, track and report on key data, improve productivity and make informed strategic decisions that can have a direct influence on profitability or the direction of the business.

Architecture

- Microsoft Visual FoxPro ■ Microsoft SQL Server 2000
- Windows 2003 Server ■ Windows XP Professional
- Modular

Financial Management

- Multi-currency ■ Multi-company ■ Definable Accounting Periods ■ Definable Chart of Accounts

Information Management

- Extensive Financial and Management Reporting
- Instant Messaging ■ Online Analytical Processing (OLAP) ■ Automation of Tasks ■ Security controlled by Opera II Enterprise SQL Security Manager

Tailoring and Integration with other systems

- E-mail and Internet enabled ■ OLE — Object Linking and Embedding facilities ■ Output to MS Excel and MS Word ■ User-definable View Screens ■ Developers' Toolkit for customisation requirements

Start with the solution to suit your business

Opera II Small Business

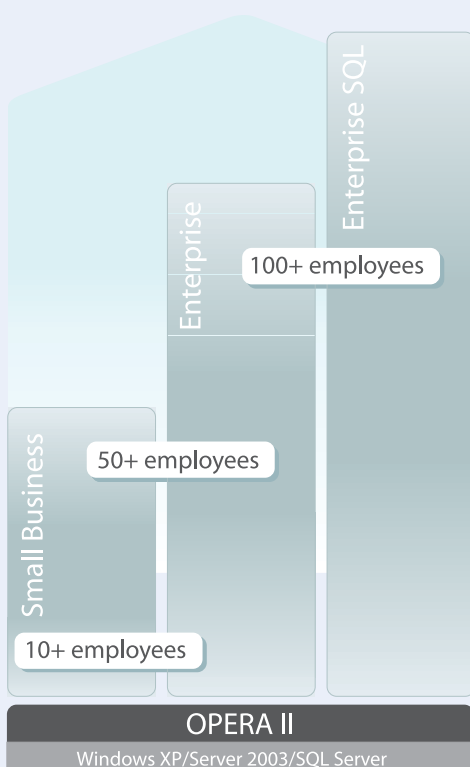

An entry level version of Opera II, Opera II Small Business includes all the standard functionality of Opera II and is specifically designed to meet the needs of the smaller business that may not need the same level of scalability, analysis and management reporting.

Opera II Enterprise

With thousands of users, Opera II Enterprise is the business solution of choice for growing businesses. Now the market-leading SME product, Opera II Enterprise offers all the enhanced capabilities for financial analysis and reporting that progressive businesses require.

Opera II Enterprise SQL

Using Microsoft SQL Server, Opera II Enterprise SQL is an alternative to Opera II Enterprise. It is an ideal solution for small and medium-sized businesses who wish to utilise the powerful applications within Opera II Enterprise alongside Microsoft's industry-leading database technology.

Keeping your business healthy

Financial management is at the heart of any business and, when tightly controlled, is one area that can help drive it forward. The financial applications of Opera II Enterprise SQL are designed to do just that.

Sales, Purchase, Nominal, Advanced Nominal, Multi-Currency, Cashbook and EC VAT provide the integrated tools needed to fully control financial data and processes.

Sophisticated and flexible analysis

The functionality within the Nominal Ledger effortlessly adapts to the analytical requirements of businesses. Multiple dimensions make it easy to analyse key information, such as expenses or revenues by Nominal Account, Cost Centre, Department or Projects. The financial position is always available and can be analysed and interrogated using definable dynamic view screens.

Financial reporting

Financial reporting is extensive within Opera II Enterprise SQL and includes an Excel-based report writer, XRL (eXcel Reporting Layer). Using XRL, Opera II Enterprise SQL data can be easily manipulated to provide enhanced analytical power, which can assist and simplify even the most complex decision-making processes. Key data from other sources can also be combined to offer complete enterprise reporting. Budget information, stock adjustments and price lists manipulated and maintained within Excel can also be written back into Opera II Enterprise SQL, saving time and effort as well as avoiding re-keying errors.

Put yourself in control

Integrate sales and stock with financial information and automate the delivery of customers' orders with effective stock management. Respond to demand for products and pricing quickly and efficiently, retaining customer loyalty and increasing levels of customer satisfaction, and you have the complete control required to manage the business. The logistics applications of Stock, Sales Order Processing and Purchase Ordering Processing provide this control. Add Payroll and HR applications that are fully tested to meet the Inland Revenue Payroll Standard, and it's clear that Opera II Enterprise SQL delivers a complete accounting and business solution.

Instant Communications

Pegasus Instant Messenger (PIM) is the instant messaging application of Opera II Enterprise SQL. It delivers features that go beyond accounting and can actually help grow businesses. Business-critical information can be shared with designated recipients as discreet pop-up messages, e-mails or reports and can be configured by precise business rules, timed events or specific topics. It's easy to set up and use, and puts accounting information to work outside the accounts department — always keeping an eye out for your business.

Ask your Pegasus Partner
